EXTREME TEMPERATURE & HIGHLY EROSION RESISTANT REFRACTORIES FOR CARCASS AND TREAD REACTORS

Saint Gobain supplies refractory solutions worldwide to all major carbon black processes.

The furnace operator starts the dialogue by defining the operational conditions required to produce the grade of black desired. Reactor temperatures, reactor geometries, fuel source(s), feed source(s) are all significant starting factors. Operating conditions vary by furnace zone. The different zones have unique challenges in regards to their atmosphere (oxidizing or reducing), gas velocities, chemical interactions, and temperature fluctuations. Saint Gobain works closely with furnace operators to provide refractory solutions best suited to meet the performance and cost goals of the operator. Lining solutions are customized by material form and grade:

Material forms: bricks, specialty shapes, precast shapes, fused cast shape, and castables

Material grades: Aluminas and Zirconias.
