Ceramics Expo
Booth #246

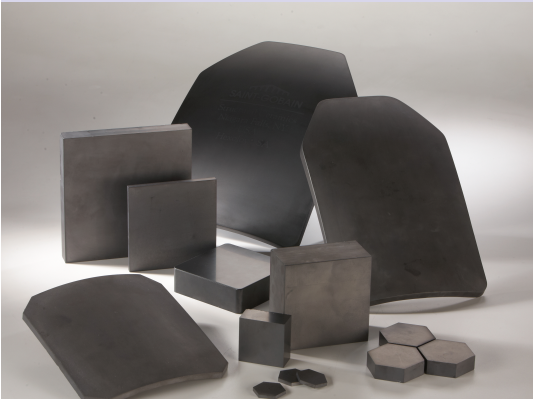

Reduce Emissions
Increase Thermal Efficiency
Save Money

How it Works

When you insert the SpyroCor™ system into the exhaust leg of your radiant tube, our patented twist tape design and silicon carbide formulation significantly enhances heat released within your furnace. The result is a life-long energy savings, throughput increase, and a reduction in emissions.

Security & Defense

HEXOLOY® Silicon Carbide

Wear Resistant Technology

Innovation for Sustainability

Saint-Gobain High-Performance Ceramics and Refractories works in partnership with our customers to develop innovative and sustainable ceramic solutions. With brands such as Hexoloy®, Durafrax® and Forceram®, Saint-Gobain offers a range of products that meet the most critical needs in your industry. Come meet the most recent addition to our product family, Amasic-3D™, the leading edge of advanced additive manufacturing technology with direct-to-shape, complex ceramic geometries previously impossible to manufacture.
