HIGH PERFORMANCE TAP HOLE CLAY

A KEY FOR BLAST FURNACE HEARTH PROTECTION AND COST REDUCTION
A high-performance tap hole clay allows a blast-furnace hearth to continue operating with a safe protection, enabling to increase its operational life for many years and consequently reducing the overall costs of maintenance & stoppages.

Saint-Gobain offers a complete portfolio of high-performance tap hole mix for blast furnaces of all sizes. By selecting the finest raw materials and by thorough understanding of the current furnace conditions, we offer custom products with leading technology to ensure increased tap hole lengths, reduced tapping time and a suitable protection of the furnace hearth.

Besides tap hole mix for applications involving regular operational conditions, we offer unique fast sintering materials for consecutive tapping operations in small furnaces, expansive clays for furnaces blow-in and a crack-closing technology for damaged tap hole mushrooms.

**OUR DIFFENTIALS**
- Tailor made
- Local Technical Support
- Ecological product line
- Strong & stable partnership
- Sate-of-the-art technology

**KEY FEATURES**
- Easy to drill
- Improved Plasticity
- High corrosion resistance
- High abrasion resistance
- Improved adhesive strength
- Good sintering behavior

**YOUR BENEFITS**
- Reduce overall cost
- Lower consumption of tap hole clay
- Better protection of the BF hearth walls
- Better and stable drainage of metal from the furnace
- Robust composition for harsh process condition

**WHY CHOOSING SAINT GOBAIN?**

Over 3 decades, Saint-Gobain has partnered with Shinagawa Refractories, one of the leaders in refractory solutions for ironmaking industry, for designing, developing and manufacturing of custom solutions to the fast changing and demanding market needs.

This collaboration has helped us to become the most preferred choice and a strong brand across ironmaking plants, for its most advanced tap hole clay technology, fast technical assistance and tailor made innovative solutions.
Responding to market demand, Saint-Gobain offers eco-friendly tap hole clay solutions. As a green solution, a substitute binder with reduced concentration of PAHs (Polycyclic Aromatic Hydrocarbons) provides benefits including:

- Reduced toxicity equivalent factor to 1% relative to 100% with tar-bonded tap hole clay
- BaP (Benzo(a)pyrene) content according to European regulations
- Free of phenol formaldehyde
- Higher viscosity stability with time at temperature > 100°C
- Higher fixed Carbon content
- Excellent corrosion resistance behavior

**TOXICITY EQUIVALENT FACTOR**

\[(\text{BaP-TEQ})_{\text{TAR-BOND}} = (\text{BaA}) \times 0.1 + (\text{Chry}) \times 0.01 + (\text{BbFA}) \times 0.1 + (\text{BkFA}) \times 0.1 + (\text{IP}) \times 0.1 + (\text{DahA}) \times 5 + (\text{BghiP}) \times 0.01\]

**CASE STUDY**

**High temperature properties**

**HOT MODULUS OF RUPTURE & APPARENT POROSITY**

**CORROSION RESISTANCE - PIG IRON AND SLAG ATTACK**
FIELD RESULTS

The tap hole clay developed with the novel technology is able to hold its enhanced performance at high temperatures, as noted by the high HMoR (Hot Modulus of Rupture) values. Such aspect is highly relevant, as low values of hot mechanical strength could easily decrease the material’s erosion resistance to the aggressive pig iron peripheral flow. Owing to such improved mechanical strength and to the proper grain size distribution, the “new THM” formulation presented a much better corrosion resistance to both slag and pig iron.

IRON MAKING SOLUTIONS

With over 5 decades of experience in providing refractory solutions for the Iron Making process, Saint-Gobain Performance Ceramics & Refractories understands every customer need thoroughly which enables us to offer custom solutions.

Not limiting to engineering high-quality products for blast furnaces, Saint-Gobain stands as a worldwide leader in the supply of refractories for reduction through concretes with excellent performance characteristics for trough runners, Al2O3-SiC-C bricks for torpedo ladles (torpedo cars) and high-quality best in class tap hole mix for iron notches including the most innovative ecological THM.
